

TRADE-FLASH 2.7

The Flexible Back Flashing

TRADE-FLASH is an extrusion formed using two flat portions of hard PVC that are joined together by a soft PVC hinge. The hinged middle section makes the **TRADE-FLASH** sufficiently flexible to be used as a flat, internal or external back flashing.

TRADE-FLASH incorporates a return on the outer edge of the flashing to contain any moisture.

TRADE-FLASH is used behind exterior cladding junctions as a moisture barrier to ensure any water or moisture that manages to get past the joint between the substrates is directed harmlessly to the outside of the dwelling.

TRADE-FLASH is easy to cut and fit onsite.
